

Low-Income & Minority Beneficiaries in Medicare Advantage Plans, 2011

February 2013

SUMMARY

New data from the Medicare Current Beneficiary Survey (MCBS) show that Medicare Advantage plans, Medicare's private comprehensive health plans, continue to be a vital source of coverage for low-income and minority beneficiaries in 2011. Here are some key findings:

- Nationwide, 28 percent of all Medicare beneficiaries were enrolled in Medicare Advantage plans. Thirty-one (31) percent of African-American Medicare beneficiaries and 38 percent of Hispanic beneficiaries were enrolled in Medicare Advantage plans.
- Forty-one (41) percent of Medicare beneficiaries with Medicare Advantage coverage had incomes of \$20,000 or less. By comparison, 37 percent of all Medicare beneficiaries had incomes of \$20,000 or less.
- Twenty-seven (27) percent of Medicare beneficiaries with incomes of \$10,000 or less were enrolled in Medicare Advantage plans. Thirty-three (33) percent of Medicare beneficiaries with incomes between \$10,000 and \$20,000 chose Medicare Advantage plans; 31 percent of beneficiaries with incomes between \$20,000 and \$30,000 were enrolled in Medicare Advantage.
- Sixty-one (61) percent of all minority (nonwhite) beneficiaries enrolled in Medicare Advantage in 2011 had incomes of \$20,000 or less; 59 percent of African-American and 75 percent of Hispanic Medicare Advantage beneficiaries had incomes of \$20,000 or less. By comparison, 36 percent of White Medicare Advantage enrollees had incomes of \$20,000 or less.

Figure 1. Income Range of All Medicare Beneficiaries, by Coverage Type, 2011

Source: Medicare Current Beneficiary Survey Access to Care files, 2011 (CMS).

Note: Calculations based on responses by non-institutionalized Medicare beneficiaries reporting income. The percentages in this table may not sum to 100 percent due to rounding and the exclusion of the “Other” category.

As with prior reports in this series, the statistics in this report were calculated from the publicly available MCBS Access to Care files. We analyzed a subset of records for non-institutionalized (aged and disabled) beneficiaries. All of the statistics include data on Medicare beneficiaries in all areas of the United States. For the Medicare Advantage and Medicaid categories, June 2011 was the point in time for which beneficiary records were selected for inclusion. In this report, we used the term “Medicare only” as shorthand for beneficiaries with the fee-for-service part of Medicare coverage only.

MEDICARE ADVANTAGE COVERAGE BY INCOME

Nationwide, 28 percent of all non-institutionalized Medicare beneficiaries chose Medicare Advantage plans in 2011. Medicare Advantage is most common among beneficiaries with incomes between \$10,001 and \$20,000 (33 percent); and \$20,001 and \$30,000 (31 percent).

Among beneficiaries with incomes between \$10,001 and \$20,000, the most common forms of comprehensive or supplemental coverage were Medicare Advantage plans (33 percent) and Medicaid, which accounted for 22 percent (see Figure 1 and Table 1). Among beneficiaries in this income range, 9 percent had employer-based supplemental coverage;¹ 14 percent purchased Medigap supplemental policies, and 20 percent had no additional coverage (“Medicare Only”).

Among Medicare beneficiaries with incomes of \$10,000 or less, 47 percent were enrolled in Medicaid;² 27 percent were in Medicare Advantage plans; 5 percent purchased Medigap coverage; 4

¹ Persons with both employer-based and Medigap coverage were categorized as having employer-based coverage.

² An additional one percent of beneficiaries in this income range had coverage classified as “other public,” which includes military or veterans’ coverage. The percentages listed in this report may not always sum to 100 percent, because for some statistics, we did not display the information from the “other public” category and/or we rounded to the nearest whole number.

Table 1. Income Range of All Medicare Beneficiaries, by Coverage Type, 2011

Coverage Type	Income Range						
	\$10,000 or Less	\$10,001 to \$20,000	\$20,001 to \$30,000	\$30,001 to \$40,000	\$40,001 to \$50,000	More than \$50,000	All Income Ranges
Medicare Advantage	27%	33%	31%	28%	21%	20%	28%
Medicaid	47%	22%	3%	**	**	**	12%
Employer-Based	4%	9%	25%	34%	44%	51%	26%
Medigap	5%	14%	20%	21%	21%	20%	17%
Other	1%	1%	1%	**	**	0%	1%
Medicare Only	16%	20%	19%	16%	14%	9%	17%
Total	100%	100%	100%	100%	100%	100%	100%

Note: Calculations based on responses by non-institutionalized Medicare beneficiaries reporting income. The percentages in this table may not sum to 100 percent due to rounding.

**Less than 0.5 percent

percent had employer-based coverage; and 16 percent had Medicare fee-for-service coverage only.

By contrast, Medicare beneficiaries in the higher income categories were most likely to have employer-based coverage. For example, 44 percent of beneficiaries with incomes between \$40,001 and \$50,000 had employer-based coverage. This proportion rises to 51 percent for beneficiaries with incomes over \$50,000.

MINORITY BENEFICIARIES

Among all minority (nonwhite) beneficiaries in Medicare, 32 percent were enrolled in Medicare Advantage; 26 percent were in Medicaid; 16 percent had employer-based coverage; 5 percent purchased Medigap policies; and 20 percent had Medicare fee-for-service coverage only.

Among minority beneficiaries with incomes between \$10,001 and \$20,000, 35 percent were enrolled in Medicare Advantage plans, and 30 percent were enrolled in Medicaid. Smaller percentages had employer-based supplemental coverage (7 percent)

and Medigap coverage (4 percent). Twenty-two (22) percent of nonwhite Medicare beneficiaries in this income range had no supplemental or Medicare Advantage coverage (see Figure 2).

Figure 3 shows the percentages of Medicare Advantage enrollees with annual incomes of \$20,000 or less by race/ethnicity.

- Sixty-one (61) percent of minority beneficiaries in Medicare Advantage had incomes of \$20,000 or less.
- Among African-American beneficiaries enrolled in Medicare Advantage, 59 percent had incomes of \$20,000 or less; 35 percent had incomes between \$10,001 and \$20,000; and 24 percent had incomes of \$10,000 or less.
- Among Asian-American beneficiaries enrolled in Medicare Advantage, 63 percent had incomes of \$20,000 or less; 35 percent had incomes between \$10,001 and \$20,000; and 28 percent had incomes of \$10,000 or less.

Figure 2. Nonwhite Medicare Enrollees with Incomes between \$10,000 and \$20,000, by Coverage Type, 2011

Source: Medicare Current Beneficiary Survey Access to Care files, 2011 (CMS).

Note: Calculations based on responses by non-institutionalized Medicare beneficiaries reporting income. The percentages in this figure may not sum to 100 percent due to rounding.

- Among Hispanic beneficiaries enrolled in Medicare Advantage, 75 percent had incomes of \$20,000 or less; 38 percent had incomes between \$10,001 and \$20,000; and 37 percent had incomes of \$10,000 or less.
- By comparison, among White beneficiaries enrolled in Medicare Advantage, 36 percent had incomes of \$20,000 or less; 26 percent had incomes between \$10,001 and \$20,000; and 10 percent had incomes of \$10,000 or less.

“ACTIVE CHOOSER” MEDICARE BENEFICIARIES

Medicare beneficiaries who did not have employer-based or Medicaid coverage available to them in 2011 can be described as “active choosers.” These beneficiaries could choose either Medicare Advantage or a Medigap supplemental policy for their coverage, or they could choose Medicare alone. Of low-income active choosers with incomes between \$10,001 and \$20,000; 48 percent were enrolled in Medicare Advantage plans; 21 percent purchased

Medigap policies; and 30 percent were covered by Medicare alone (see Figure 4).

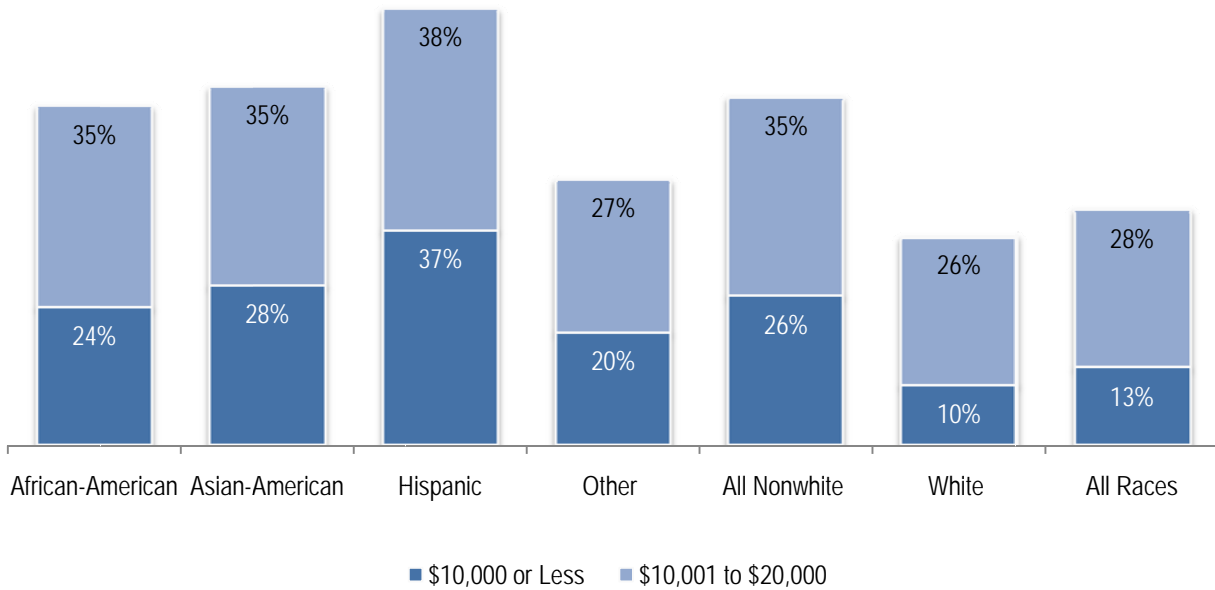

Among African-American low-income active choosers, 57 percent were enrolled in Medicare Advantage plans; 7 percent purchased Medigap policies; and 36 percent were covered by Medicare alone. Fifty-eight (58) percent of Hispanic low-income active choosers were enrolled in Medicare Advantage plans; 5 percent purchased Medigap policies, and 36 percent were covered by Medicare alone. Among White low-income active choosers, 46 percent were enrolled in Medicare Advantage plans; 25 percent purchased Medigap policies; and 29 percent were covered by Medicare alone.

ACKNOWLEDGEMENTS

The statistics in this report were calculated and prepared for publication by Jessica Collins, Research Analyst.

 Note: Calculations based on responses by non-institutionalized Medicare beneficiaries reporting income. Components may not sum to totals due to rounding. Zero (0) percent of low income Asian-American "active choosers" had Medigap coverage.

APPENDIX A: METHODOLOGY

Data for this study came from the 2011 Medicare Current Beneficiary Survey (MCBS) Access to Care files, maintained by the Centers for Medicare & Medicaid Services (CMS). We used SAS Enterprise Guide® 5.1³ software to analyze the data. A subset of the data, which included records of beneficiaries who were not institutionalized, was used for analysis. Each beneficiary record in the subset was categorized according to a hierarchy of six coverage types as follows:

- Enrolled in Medicare Advantage
- Enrolled in Medicaid
- Has employer-based insurance, or employer-based insurance and self-purchased insurance (Medigap)
- Has self-purchased insurance only (Medigap)
- Has other public coverage
- Has Medicare only (Medicare fee-for-service only)

For example, the first coverage type included beneficiaries with Medicare Advantage; the second coverage type included beneficiaries with Medicaid, excluding beneficiaries who were also enrolled in Medicare Advantage, and so on. For beneficiaries categorized in the Medicare Advantage and Medicaid hierarchies, June 2011 was the point in time for which beneficiary records were selected for inclusion. It is worth noting that interviews for the Access to Care files occur once a year, while the MCBS Cost and Use files are based on responses to interviews that are conducted three times annually. Hence, the MCBS Access to Care files are more likely to be influenced by beneficiaries' gaps in coverage, and

³ SAS and all other SAS Institute Inc. product or service names are registered trademarks or trademarks of SAS Institute Inc. in the USA and other countries. ® indicates USA registration

would therefore tend to show fewer beneficiaries with supplemental coverage than the MCBS Cost and Use files.

The third category includes beneficiaries with employer-based supplemental coverage and those with both employer-based coverage and Medigap plans. The fourth category contains beneficiaries with Medigap only. The "other public coverage" category contains beneficiaries with supplemental health benefits through military or veterans' coverage, such as TRICARE. Beneficiaries in the sixth category were found to have Medicare fee-for-service only, with no supplemental coverage.

This study also included an analysis of Medicare beneficiaries across the U.S. who did not have employer-based coverage and did not qualify for Medicaid. These beneficiaries, called "active choosers," essentially had a clear choice among Medicare Advantage, Medigap, or no supplemental coverage. We analyzed active choosers' selections of Medicare supplemental coverage by race/ethnicity, education level, and income range.

The six race/ethnicity categories of beneficiaries provided in the MCBS dataset were re-grouped into five categories. The "Other" category is comprised of individuals who were identified via administrative records as being North American Natives or those designated as "Other."

As a general rule, all records in the MCBS dataset containing data values such as "unknown" or "refused" were dropped from the analyses.
