Where Does Your Health Care Dollar Go?

Your premium—how much you pay for your health insurance coverage each month—helps cover the costs of the medications and care you receive and improves health care affordability, access and quality for everyone.

Here is where your health care dollar really goes.

- **22.2¢** Prescription Drugs
- **19.0¢** In-Patient Hospital Costs
- **19.9¢** Out-Patient Hospital Costs
- **3.3¢** Emergency Room Costs
- **11.8¢** Doctor Visits
- **6.2¢** Other Out-Patient Care
- **3.8¢** Taxes and Fees
- **3.0¢** Other Fees and Business Expenses
- **2.1¢** Cost Containment
- **0.8¢** Quality Improvement
- **4.2¢** Other Administrative Expenses
- **3.6¢** Profit

This data represents how your commercial health plan premiums pay for medical care, as well as related services and essential operations. This data includes employer-provided coverage as well as coverage you purchase on your own in the individual market. Data reflects averages for the 2018-20 benefit years. Percentages do not add up to 100% due to rounding.

<tr>
<td><strong>Prescription Drugs</strong></td>
<td>Payments for outpatient prescription medications, mostly self-administered drugs, as well as payments for prescription medications administered in the physician’s office or clinic. For both of these drug categories, the prescription drug spending was calculated net any estimated prescription drug rebates paid by the drug company.</td>
<td>Medications you pick up from your local pharmacist, like antibiotics, blood pressure pills, or creams for rashes. Also, injectable drugs that are administered by a nurse or doctor either at their office or your home.</td>
</tr>
<tr>
<td><strong>In-Patient Hospital Costs</strong></td>
<td>Payments for all services during hospitalization, including the administration of prescription drugs provided during a hospital stay, payments to physicians, and facility payments.</td>
<td>The costs for your hospital room and board, including equipment or supplies used during your hospital stay. Salaries of doctors, nursing staff and all other hospital personnel. General overhead costs of running a hospital, such as utilities and land.</td>
</tr>
<tr>
<td><strong>Out-Patient Hospital Costs</strong></td>
<td>Physician and facility non-drug related payments for treatment in the outpatient department of hospitals, not including emergency room care.</td>
<td>Going to a hospital to get an MRI or an X-ray. Visiting a primary care doctor or a specialist in the hospital outpatient department.</td>
</tr>
<tr>
<td><strong>Emergency Room Costs</strong></td>
<td>Physician and facility non-drug related payments for emergency room visits and ambulance transportation.</td>
<td>Paying doctors for their time and expertise in arriving at a diagnosis and a treatment plan during your hospital emergency room visit. Paying for equipment or supplies used during your visit. General overhead necessary to operate the emergency room around the clock. If you stay overnight, the payment is included under inpatient hospital costs.</td>
</tr>
<tr>
<td><strong>Doctor Visits</strong></td>
<td>Payments to doctors or clinics for all non-drug related outpatient services provided during visits to doctor offices, clinics, and urgent care facilities.</td>
<td>Equipment or supplies used during a doctor or nurse visit. Paying doctors for their time and expertise in arriving at a diagnosis and a treatment plan for you. Salaries of nursing staff and other ancillary staff. Office rent and general overhead costs of running a physician’s office or clinic.</td>
</tr>
<tr>
<td><strong>Other Out-Patient Care</strong></td>
<td>Payments for all outpatient services incurred outside hospitals, doctor offices and clinics, such as claims from ambulatory surgery centers, labs, dialysis, or at-home care.</td>
<td>Lab work, treatment in dialysis centers, home health, or surgeries performed in the ambulatory surgery centers.</td>
</tr>

<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Taxes and Fees</td>
<td>All taxes and assessments paid by the health insurance provider.</td>
<td>All the usual federal, state, and local taxes paid by any business, like income taxes, property taxes, payroll taxes. Also includes payments that are unique to a health insurance provider, like taxes paid on insurance premiums and regulatory authority licenses and fees.</td>
</tr>
<tr>
<td>Other Fees and Business Expenses</td>
<td>Agent and broker direct sales salaries and benefits, fees and commissions paid to agent and brokers, and insurance rebate payments.</td>
<td>Expenses required to run any insurance business, like costs associated with paying insurance agents and brokers. Also includes money paid back to customers as insurance premium rebates.</td>
</tr>
<tr>
<td>Cost Containment</td>
<td>Claims adjustment expenses, detection and prevention of fraud and abuse, case management, expenses for appeals, expenses for developing and managing provider and prescription drugs networks.</td>
<td>Prevention of fraud, waste, and abuse by doctors and patients. Answering questions from doctors and hospitals. Helping providers with best practices. Ensuring proper credentialing for quality care. Programs to better manage chronic conditions and coordinate care between doctors, to ensure that the right treatment is provided to the right patient at the right time.</td>
</tr>
<tr>
<td>Quality Improvement</td>
<td>Efforts to improve health quality and increase the likelihood of desired health outcomes such as preventing hospital readmissions, improving patient safety, wellness and health promotion, and health information technology.</td>
<td>Preventive care programs to keep you healthy, like weight management plans or helping people to quit smoking. Patient education and follow-up calls by health plan staff to members discharged from a hospital. Services to improve health in communities, like sponsoring local health fairs and providing free disease screenings and other educational events.</td>
</tr>
<tr>
<td>Other Administrative Expenses</td>
<td>General and administrative costs to run the business, including salaries, outsourced services, equipment, accreditation and certification fees, rent, legal fees and expenses, advertising, postage, utilities, etc.</td>
<td>Managing employee benefits and retirement plans. Reviewing contracts or conducting legal research. Maintaining office space.</td>
</tr>
<tr>
<td>Profit</td>
<td>Net profit of for-profit health insurance providers and the difference between total revenue and total expenses for not-for-profit health plans.</td>
<td>The revenue remaining after all costs are paid. In for-profit companies, this is commonly paid to shareholders in the form of dividends.</td>
</tr>

</table>
Methodology

The goal of our analysis is to show how premiums for a typical commercial (employer-provided coverage and individual market) health insurance plan are invested. The analysis shows the inflation-adjusted average annual amounts paid by commercial health insurance plans in 2018-2020 for the medical care of plan members; the average annual amounts paid for general operating expenses; and the average annual reported profit or loss. The data reflect the impact on health plan spending related to COVID-19 inasmuch as it affected the provider payments, profit and administrative expenses in 2020.

What’s New from Prior Updates

For this edition of the premium dollar spending analysis, AHIP made several methodological changes compared to its most recent version released in 2020:

Drug costs net of rebates: As in 2020, AHIP subtracted the published estimates of pharmaceutical manufacturers rebates to present the prescription drugs spending net of all rebates received, which are not reflected in the claims data. In this edition, AHIP used more recent estimates for the value of the pharmaceutical manufacturers rebates calculated based on health insurance providers’ mandatory medical loss ratio (MLR) filings from Plummer E, Socal MP, Ballreich JM, Anderson GF, Bai G. Trends of Prescription Drug Manufacturer Rebates in Commercial Health Insurance Plans, 2015-2019. JAMA Health Forum. 2022;3(5):e220888, available at https://jamanetwork.com/journals/jama-health-forum/fullarticle/2791964. AHIP used the 2019 median rebate percentages for individual, small and large commercial plans and apportioned the value of rebates according to the share of national fully insured commercial enrollment in individual, small and large plans based on the 2019 National Association of Insurance Commissioners (NAIC) and California Department of Managed Health Care enrollment data.

Overview of Data Used

Medical Services

To determine the annual amounts paid for medical services in 2018-20, the commercial claims data from the Merative™ MarketScan® Commercial Database were summarized. The Inpatient Services file, the Outpatient Services file, and the Outpatient Drug file of the MarketScan® database were utilized for the study.

Since the analysis used multiple years of data, all expenditure data from 2018 and 2019 were adjusted for inflation and expressed in 2020 dollars. This inflation adjustment was performed using the Medical Care Component of the Consumer Price Index (CPI) reported by the U.S. Bureau of Labor Statistics (www.bls.gov).

Only those patients under the age of 65 on the date of service who had evidence of continuous health plan enrollment for the entire period in each study year (2018, 2019, or 2020) and had prescription drug coverage were included. Claims having missing payment information; missing dates of service; and in the case of the inpatient and outpatient services claims, missing data on whether the claim was submitted by the facility or the physician were excluded from the study. The main variable of interest was the “net payment” variable which is the amount paid by the health insurance provider. The net payment amounts of all included claims for each study year were summed.

Operating Expenses and Profit:

AHIP analyzed financial statements of 30 health insurance providers: 5 largest publicly traded for-profit commercial health insurance companies and 25 randomly selected not-for-profit health insurance providers that had the majority of their business (i.e., greater than 50% of enrollees) in the commercial market.

To estimate operating expenses and profitability, for the 5 publicly traded insurance providers, their 2018-2020 10K filings with the Securities and Exchange Commission were examined; while operating expenses and profitability data for private, not-for-profit organizations were extracted from their 2018-2020 Form 990s, filed with the Internal Revenue Service, or, when not available, from the financial statements published on the health plans’ websites.
We were unable to obtain a Form 990 or a financial statement from one plan in 2018, thus, its operating expenses and profits are the average of 2 years of data (2019 and 2020). Additionally, the IRS granted filing extensions in 2020 due to the impact of the COVID-19 pandemic. Many plans used this opportunity and submitted their Form 990 much later than usual. As a result, AHIP was able to locate and use in the calculation 8 Form 990 submissions for 2020: the operating expenses and profits for other 17 not-for-profit plans are the average of 2 years of data (2018 and 2019). Based on previous years’ analysis, we do not project that the additional Form 990s, once available, will have a meaningful impact on our estimates.

Premium Revenues

Only those revenues attributable to premium payments from health plan members were recorded for each plan for each year (2018-2020). Revenues from sources other than premium payments, such as from other business segments or investment income, for example, were excluded. For each plan, the average revenue across the 3 years was calculated.

For the 5 publicly traded, for-profit insurance providers, amounts listed in their 10K filings as “Operating Costs,” “General and Administrative Expenses,” or “Sales, General and Administrative” were extracted from their 2018-2020 Income Statements. Amounts paid for taxes were also recorded. Amounts shown as “Net Income” or “Net Profit” were also recorded. For each plan, average total operating expenses and an average net profit were calculated across the 3 years and recorded. During the years of our study, the Health Insurance Providers fee was in place for 2018 and 2020. In 2019, there was a moratorium.

For the 25 private, not-for-profit entities, their total operating expenses were calculated by subtracting the “Benefits Paid To or For Members” from the “Total Functional Expenses” amounts appearing in their Form 990. Similarly, profitability was determined by subtracting the “Total Expenses” from their “Total Revenues.” These calculations were performed for each plan for each year and recorded. For each plan, average total operating expenses and an average net profit were calculated across the 3 years and recorded.

Finally, for those health insurance providers having multiple revenue streams beyond member premiums, some of the plans’ total operating expenses and profits could be unrelated to servicing their insured population. To account for that, we apportioned the operating expenses and profits based on the share of health plan’s revenue derived from member premiums. For example, if a plan A had 80% of its revenue derived from member premiums, we used 80% of its total operating expenses and profits in our calculations.

For each plan, the average total operating expenses and the average net profit amounts were divided by the average revenues derived from premiums to yield that insurance provider’s operating margin and net profit margin. To account for differences in the sampling of for-profit (n=5 plans) and not-for-profits (n=25 plans), a simple average of the operating margin and an average of the net profit margins were calculated separately for the for-profit and not-for-profit plan subgroups. These two averages were then weighted by these two groups’ share of commercial enrollment and combined.

The average total operating expenses calculated across all plans were further subcategorized into the key functional areas. The proportions of the average total operating expenses attributable to each of these core administrative functions were determined by the consulting firm, Oliver Wyman. Oliver Wyman analyzed 2018-2020 Supplemental Health Care Exhibit filings submitted by commercial insurance providers to the National Association of Insurance Commissioners (NAIC) as part of their statutory filings.

Since the analysis of NAIC filings used multiple years of data, all administrative expenses data from 2018 and 2019 were adjusted for inflation by using the Medical Care Component of the Consumer Price Index (CPI) reported by the U.S. Bureau of Labor Statistics (www.bls.gov) and expressed in 2020 dollars.
